

# PROTECT YOUR EMAIL

The most important features for protecting your mailbox include filtering and backup. Here's how Network Doctor can help you achieve peace of mind.

PROTECT WITH **mimecast**<sup>®</sup>

BACKUP WITH **skykick**

**94%**

of cyber attacks come from email\*

Market leading data protection for Office 365 - ensuring better business continuity for SMBs

#### Unlimited Backup

No data or retention limits, no overages

#### Rapid Search

Find lost data in seconds, robust browse & search options

#### One-Click Restore

Get back on track quickly and enjoy the peace of mind

Protect your organization from spam, malware, ransomware & phishing attacks.

#### URL Protect

Keeps your users and your organization safe by checking websites at the time of click, while educating users along the way.

#### Attachment Protect

Implements an adaptable approach applying multiple analytic techniques and sandboxing to block malicious email attachments.

#### Impersonation Protect

Defends against email attacks that use sender and domain spoofing and social engineering to coerce a user into performing an action.

#### Browser Isolation

Allows users to safely click on any embedded URL and surf the web, blocking phishing attempts and potential malware infections.
